

VMware NSX-V Upgrade: Assessment and Migration Service

Upgrade to the next generation of NSX

VMware NSX-V went end of general support in January 2022. If you are still running business critical workloads on this platform, this event presents a key operational risk.

Upgrading to the latest supported version of VMware NSX not only dramatically decreases risk but also allows your business to unlock the security benefits and hybrid cloud functionality available on a modern VMware platform.

The Xtravirt complimentary NSX-V Migration Assessment seeks to understand and identify the configuration of your current NSX-V platform in detail and the Xtravirt VMware NSX Migration Service implements that advice.

VMware NSX-V has been out of general support since January 2022

Xtravirt's NSX-V Migration Assessment

Understand the configuration of the current platform in detail, in order to map the impact of migrating to a supported VMware NSX solution and to define the route to take for migration.

Strategy

Strategy requirements, constraints and operational readiness for NSX-T.

Workshop

Workshops and hands-on sessions to define which migration approach is the best fit.

Report

Full impact assessment report and indicative project planning.

Xtravirt's NSX-V Upgrade and Migration Service

Utilising expert skill and proven methodology Xtravirt plan the migration approach to best fit your business and design the initial configuration of core VMware NSX functionality including security policies and micro segmentation ensuring early benefit from new features.

Co-Existence

Introduce an VMware NSX cluster within the existing environment.

Greenfield

Design & deploy a clean VMware NSX environment on new or provisioned hardware.

In-Place Migration

Use of NSX Migration Coordinator to facilitate in-place upgrade.
